Ideation Phase
Brainstorm & Idea Prioritization Template

Date	2 March 2026
Team ID	Adarsh Singh Aditi Parashar Aditya
Project Name	Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Brainstorming

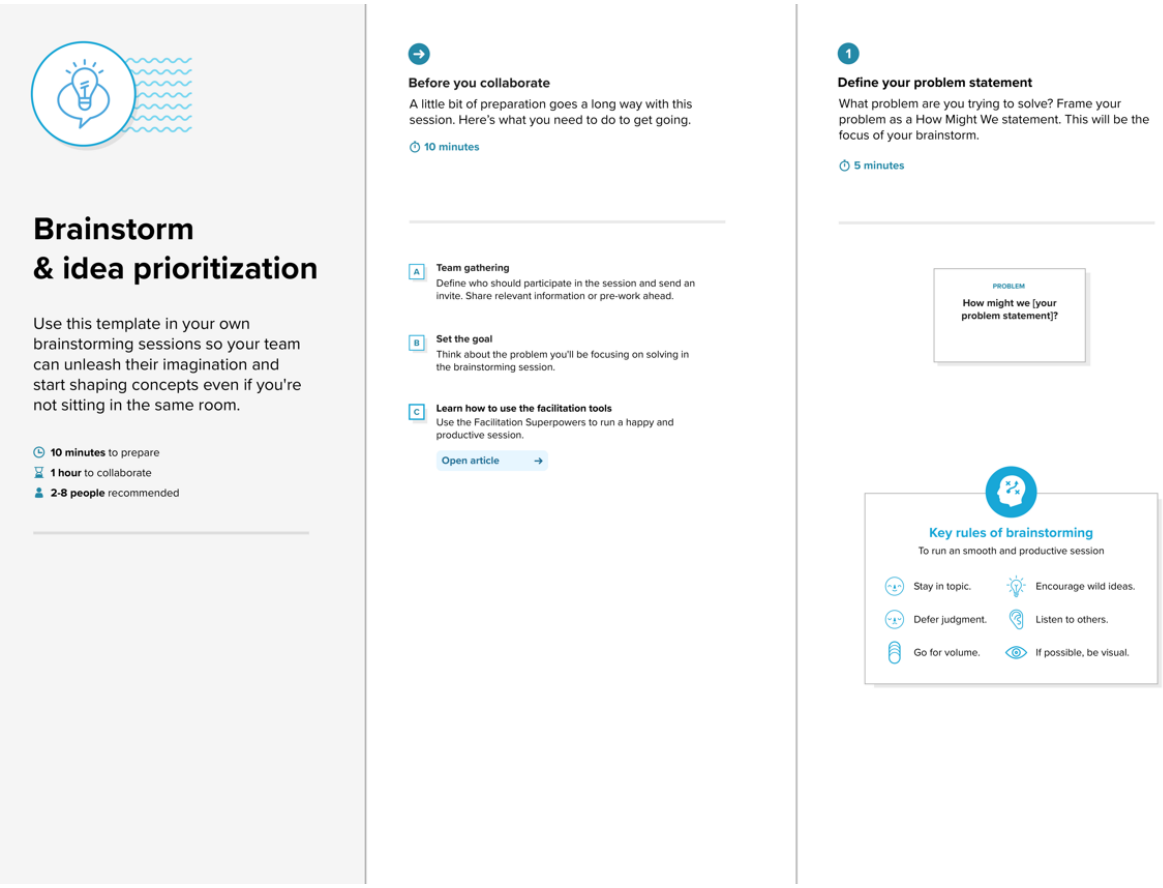
For our project **Visualizing Housing Market Trends**, the brainstorming stage helped us generate ideas about how housing data can be analyzed and presented effectively.
We discussed different aspects of the housing market such as price changes over time, location-wise housing prices, and the relationship between house size and price.
We also explored which types of visualizations would best represent this information, such as line charts for price trends, bar charts for regional comparisons, and scatter plots to show relationships between variables like area and price.
During this stage, we focused on identifying visualizations that could clearly explain housing patterns to potential buyers, investors, or researchers.
This brainstorming process helped us collect multiple ideas and perspectives before deciding what to include in our final dashboard.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

In the first step of our project, the team gathered to discuss possible project ideas related to data visualization and analytics. Each team member shared their thoughts and suggestions on different domains where data analysis could provide meaningful insights. After brainstorming several ideas, we collectively decided to focus on the **housing market**, as it is an important sector where price trends, location, and property features greatly influence decision-making.

Through collaboration, we identified the problem statement: **analyzing and visualizing housing market trends using data visualization tools**. The aim of the project is to help users easily understand housing patterns such as price distribution, location-wise trends, and the relationship between property features and prices.

After selecting the problem statement, the team agreed to use **Tableau** to create interactive dashboards and visualizations. This step helped us clearly define the project objective and ensured that all team members had a common understanding of the project goals.

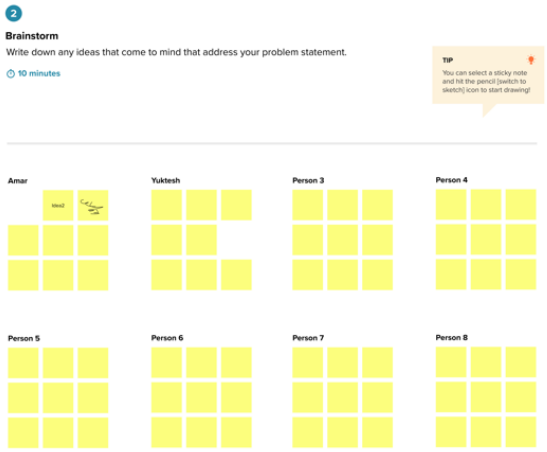


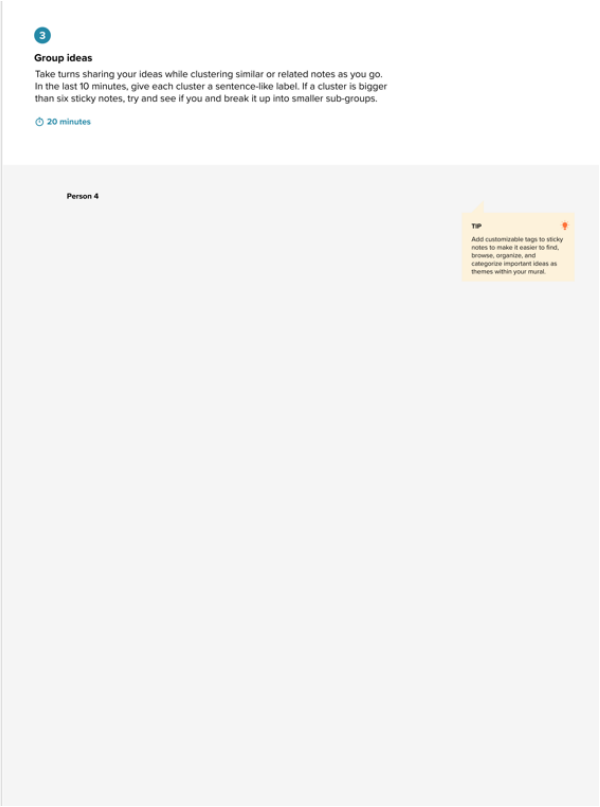
Step-2: Brainstorm, Idea Listing and Grouping

In the second step of our project, the team conducted a brainstorming session to generate ideas related to the analysis of the housing market. Each member suggested different ways in which the housing dataset could be explored to identify meaningful patterns and trends. Ideas included analyzing **housing price distribution**, understanding the **impact of property features such as bedrooms, bathrooms, and floors on price**, and examining whether **renovated houses have higher market value**.

After listing these ideas, we grouped them into related categories to organize the analysis more effectively. The ideas were mainly grouped into three areas: **price analysis**, **property feature comparison**, and **renovation impact on housing value**. This grouping helped us identify the key aspects of the housing market that could provide useful insights for potential buyers, investors, and researchers.

By organizing the ideas in this way, it became easier to decide which visualizations should be created. This step ensured that the project focuses on meaningful insights and that the final dashboard clearly represents important **housing market trends and patterns**.





Step-3: Idea Prioritization

After generating ideas, we moved to the idea prioritization stage to select the most meaningful visualizations for our project.
We evaluated each idea based on how clearly it represents housing market trends and how useful it would be for users analyzing the data.
Priority was given to visualizations that highlight key insights such as price trends over time, comparison of housing prices across different locations, and the impact of house features on pricing.
By narrowing down the ideas, we focused on the most informative charts that help users quickly understand the housing market.
This prioritization ensured that our final dashboard remains simple, clear, and effective in presenting housing market insights.

4

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.
